

DELL POWEREDGE SC440 SERVER

The Dell™ PowerEdge™ SC440 offers small businesses an affordable server with room to grow.

Productivity

The PowerEdge SC server line now has Intel's dual-core technology delivering world class performance combined with excellent energy/power efficiency. The PowerEdge **SC440** has multiple processor options. Dual-core technology combines two processing cores into a single processor chip for a dramatic increase in performance. Dual-Core Intel® Xeon® 3000 Sequence Processors, Intel® Pentium® D processors, and the Intel® Celeron® D processors provide alternatives for performance and value. With so many options, customers can select the processing power that best suits their needs and fits within their budget. This server delivers exceptional value for small businesses replacing a peer-to-peer network or an old server.

The PowerEdge **SC440** features Microsoft® Small Business Server 2003, designed to help small businesses take advantage of the Internet, strengthen customer relationships, and help improve employee productivity. And with additional operating system choices, this server can help customers easily transition from bottle-neck prone peer-to-peer networks to a client-server environment with ease.

Flexibility

The PowerEdge **SC440** is designed to give small businesses the flexibility necessary to stay competitive. With 50% more SATA storage capacity and higher performance networking slots than the previous generation Dell server, the **SC440** can scale with the growing needs of the business. Its memory, I/O technology, and storage capacity make the PowerEdge **SC440** an ideal option for small businesses with five to ten clients that require high uptime for dedicated applications, file/print utilization, messaging, and shared Internet access.
