

## DELL POWEREDGE 1955 SERVER

**For space-constrained environments where high processing capability is needed, the Dell™ PowerEdge™ 1955 modular blade server helps make the most of floor space without sacrificing high performance. It is ideal for edge of network, infrastructure and other applications that demand performance and I/O throughput.**

### **Dell's Innovative 9th Generation PowerEdge Servers**

Through ground-breaking hardware design and continued focus on fewer system updates, Dell's 9th generation PowerEdge servers help reduce the complexity involved in managing data, whether you are a large enterprise or a small business. The servers are designed to a Dell-developed Behavioral Specification that defines consistent hardware layout and user interaction across all server models in this and future PowerEdge generations. Featuring the latest Intel® Xeon® processors, the 9th generation PowerEdge servers offer the power and performance you expect from Dell.

### **The Dell PowerEdge 1955 Server Saves Valuable Data Center Resources**

By sharing one chassis infrastructure across multiple servers, the Dell PowerEdge 1955 blade server offers exceptional rack density. As many as 10 blade servers fit in one 7U chassis and share components like power, cooling, server management and embedded I/O Pass-Through devices. The result can be reduced data center floor space usage, a 70 percent reduction in necessary cables and simpler installation and maintenance.

### **High Performance and Availability to Maximize Uptime**

The Dell PowerEdge 1955 server delivers incredible processing power in an efficient, small form factor. Each blade features two Intel® Xeon® Quad-Core processors that provide next generation performance. It also includes Fully Buffered DIMMs for advanced memory and performance benefits, low latency response and high throughput. Embedded I/O connectivity options include redundant Gigabit Ethernet Layer 2 switches and Pass-Throughs, and Fibre Channel switches and Pass-Throughs, as well as Infiniband™ Pass-Throughs.

High availability is another key benefit of the Dell PowerEdge 1955 server. All of its critical support modules including power, cooling and management features are hot-pluggable and redundant. Plus, each blade supports Single Device Data Correction (SDDC) memory technology that enables the system to withstand multi-bit errors.

### **Simplified Management to Reduce Complexity**

Simplified management is critical in highly-populated data centers. The PowerEdge 1955 server is designed to help reduce deployment, management and maintenance complexity. Each PowerEdge system is shipped with Dell OpenManage™ IT Administrator and Server Assistant software that guides you through set-up and installation. The PowerEdge blade chassis also includes Dell Remote Access Card (DRAC)/MC management modules and embedded KVMs that enable management from a remote location. Furthermore, the Dell PowerEdge 1955 blade server fits into the current Dell modular server chassis to protect your technology investment and help reduce Total Cost of Ownership.

<sup>1</sup>This term does not connote an actual operating speed of 1 Gb/sec. For high speed transmission, connection to a Gigabit Ethernet server and network infrastructure is required.  
<sup>2</sup>For hard drives, GB means 1 billion bytes, actual capacity varies with preloaded material and operating environment and will be less.
